1.1.1. Area of Circle

15/12

Write a Python program that calculates the area of a circle when the radius is provided by the user. Use $\pi = 3.14$ and display the area.

Input Format:

A single line containing a floating-point number representing the radius.

Output Format:

Print the computed area of the circle formatted to 4 decimal places.

Sample Test Cases

circlearea...

Submit

1radius = float (input())

2area = 3.14 * radius * radius

3print(f"area: .4f")
